DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-16, drawn to "DC coupled class AB transconductance blocks", classified in class 330, subclass 285.
 - II. Claims 17-21, drawn to "RF transceivers" classified in class 455, subclass 73 (and/or 375/219).

The inventions are distinct, each from the other because of the following reasons:

Inventions II and I are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination (invention II) as claimed does not require the particulars of the subcombination as claimed because it does not required the specific detail of DC coupled class AB transconductance block (or invention I). The subcombination (invention I) has separate utility such as it can be used as power amplifier drivers (and/or other electronic devices).

2. A telephone call was made to Mr. James A. Harrison on June 3, 2005 to request an oral election to the above restriction requirement, but did not result in an election being made (the examiner left a message on Mr. Harrison's voice mail box).

Art Unit: 2819

3. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
